Serial No. 10/006,102

Attorney Docket No. 11840.00

Via Facsimile (703) 872-9310

selected for further testing. Further testing showed that an isolated organism from K.I. Reducer

showed significant activity in reducing pathogenic bacteria levels in aquatic environments. This

isolate, designated strain EHC 100, was identified as a strain of the species Bacillus cereus by

standard microbiological techniques and fatty acid analysis. This isolate has been deposited with

the Agricultural Research Service Culture Collection (NRRL), 1815 North University Street,

Peoria, Illinois, having accession number B-30535. Note that as used herein, "isolated" refers to

an organism of the present invention that has been separated from at least one contaminant found

in the organisms natural environment or found in K.I. Reducer.

In the Claims:

(Once Amended) The composition of claim 1 wherein the isolated Bacillus is 3.

strain EHC 100 having RRRL deposit accession number B-30535.

REMARKS

A copy of the amended portions of the specification showing the changes is attached

hereto and captioned "VERSION WITH THE MARKINGS TO SHOW CHANGES

MADE."

It is believed that no fees are required with this amendment. However, any fee deficiency

may be charged to Deposit Account No. 04-1415.

Dated: 12/20/02

Respectfully submitted,
